Mobile Solution Integrator

Build38 is a cyber security start up that takes care of securing mobile apps. We enable all sorts of solution providers (from car manufactures to banks, from public transit operators to identity providers) to deliver their mobile use cases in a secure manner. We already protect millions of Android and iOS endpoints with our SDK which, together with our backend analytics platform, provides the most comprehensive mobile app security solution in the market.

Build38 is an international company, with the Head Quarters in Munich, a Sales office in Singapore and the tech hub in Barcelona.

We are looking for a **Mobile Solution Integrator** for our new solution integration team. You will be responsible helping our customers in developing their mobile (Android/iOS) use cases using our solution. You will be interacting directly with the technical teams of our customers, working in a wide variety of technologies and programming languages.

In your day-to-day work, you will:

- Understand customer requirements and business challenges, current technology architecture and scope of work to determine the to-be architecture and implementation roadmap.
- Develop the required logic to integrate our product into the customer's app to fulfill the use cases.
- Periodically engage on reviewing the project progress and delivery status.
- Contribute towards the evolution of Build38 products and solutions.
- Work closely with the Product Owner to refine functional requirements.
- Not be limited to product technical development, but be involved in the full Build38 project.

You should have:

- Degree in Computer Science, similar technical field of study or equivalent practical experience.
- Experience in the mobile (Android or iOS) ecosystem.
- Experience in using hybrid development frameworks (such as Flutter or React Native).
- Professional experience using C or C++.
- Knowledge of at least one of these programming languages: Objective-C, Swift, Java and Kotlin
- Experience in interacting and working directly with customers.
- Project-driven mindset.
- Experience in assessing solution architectures at the planning and design level for feasibility and ease of delivery.
- Experience in Cybersecurity would be a bonus.

What we can offer you:

- Flexible working hours.
- Intensive working hours on Fridays.
- Nice work environment in the city center.
- Regular team/community events (breakfast, lunch, beers…).
- Comprehensive private health insurance.
- Personalized career development plan
- Free coffee & cookies.
